

PRODUCT INFORMATION

BON.AHD425 DATA VOYAGE RECORDER

BON.AHD425

Smart. Reliable. Proven.

The AHD 425 module supervises communication between the AHD 418 control unit and up to four AHD 419 operator panels in a bow thruster system. It collects both actual and target values, processes them concurrently, converts the data into IEC 61162-1 format, and transmits it via an RS422 interface with galvanic isolation to prevent interference.
